

Exercise 2: OpenMP Loop Schedules

Gabriele Sarti

April 5, 2019

Abstract

In the second exercise for the Parallel computing course, our aim is to visualize different OMP schedules using different chunks.

1 Procedure and Results

I implemented the six schedules described in the assignment and run the code on an Ulysses node using 10 threads through a script. The following listing presents the results of code execution.

```
1
2 Run ex2 with 10 threads
3
4 serial:
5 0: *****
6 *****
7 *****
8 *****
9 schedule(static):
10 0: *****
11 1: *****
12 2: *****
13 3: *****
14 4: *****
15 5: *****
16 6: *****
17 7: *****
18 8: *****
*****
```

```

19 9:
    *****
20 schedule(static , 1):
21 0: *           *           *           *           *           *           *           *
    *       *       *       *       *       *       *       *
    *       *       *       *       *       *       *       *
22 1: *           *           *           *           *           *           *           *
    *       *       *       *       *       *       *       *
    *       *       *       *       *       *       *       *
23 2: *           *           *           *           *           *           *           *
    *       *       *       *       *       *       *       *
    *       *       *       *       *       *       *       *
24 3: *           *           *           *           *           *           *           *
    *       *       *       *       *       *       *       *
    *       *       *       *       *       *       *       *
25 4: *           *           *           *           *           *           *           *
    *       *       *       *       *       *       *       *
    *       *       *       *       *       *       *       *
26 5: *           *           *           *           *           *           *           *
    *       *       *       *       *       *       *       *
    *       *       *       *       *       *       *       *
27 6: *           *           *           *           *           *           *           *
    *       *       *       *       *       *       *       *
    *       *       *       *       *       *       *       *
28 7: *           *           *           *           *           *           *           *
    *       *       *       *       *       *       *       *
    *       *       *       *       *       *       *       *
29 8: *           *           *           *           *           *           *           *
    *       *       *       *       *       *       *       *
    *       *       *       *       *       *       *       *
30 9: *           *           *           *           *           *           *           *
    *       *       *       *       *       *       *       *
    *       *       *       *       *       *       *       *
    *           *           *           *

    *****

```

2 Reproducibility

In order to obtain results that are similar to those listed above, simply clone the Github repository [1] in the personal Ulysses folder and run the following command from your main folder:

```
1 qsub -q reserved3 -l nodes=1:ppn=20 parallel-computing/Assignments/ex02/ex2.sh
```

The result will be contained in the ex2.sh.o* file which will be created in the Assignments folder.
